

Unlocking Capacity in the Breast Center

FROM OVEREXTENDED TO OPTIMIZED

THE Invisible Burden

Significant administrative tasks burden technologists and leaders:

 **Reviewing** radiology reports and catching corrections

 **Printing, stuffing, and mailing** letters per mandated timeframes

 **Monitoring** pending pathology results

 **Tracking** patient follow-up across spreadsheets and binders

 **Maintaining** MQSA compliance documentation and reporting

THE Cost of Manual Work

44% of technologists in the U.S. report moderate or severe levels of job stress:

 **Reduced Patient Access**
Centers block schedule slots for admin work, leading to fewer available appointments.

 **Burnout**
Staff who entered the field to care for patients find themselves managing paperwork.

 **Inefficiency**
Manual processes of tracking involve multiple binders and endless spreadsheets.

THE Path Forward

The operational infrastructure that restores technologist time:

 **Expand technologist capacity by offloading navigation**
Eon Breast Care Navigators manage patient outreach, follow-up coordination, and other administrative tasks.

 **Restore focus with always-on patient monitoring**
Eon continuously monitors patients over time to detect and adapt care plans as appropriate without technologist intervention.

 **Capture and care for unseen, high-risk patients**
Breast abnormalities identified outside screening pathways are automatically managed through follow-up, so cancer can be detected in its earliest stages.

 **Always MQSA inspection-ready**
MQSA compliance is built directly into screening and diagnostic workflows with one-click reports and letter tracking.

Eon Breast

Transforms early breast cancer detection programs from screening-first to risk-aligned, completed care.

1 in 8

net new patients identified through breast incidentals

4 hours

of staff capacity restored per site per week

↑ 2.7x

completed monthly downstream exams*

Together we can defy disease

See how Eon Breast can help your program bring every patient who needs follow-up to completed care
